MONTH 1 LINKS	MONTH 2 LINKS
Generated 14 Links, with/without CH/PAYE/VAT. Each field value is based on a simple counter i.e.CH-000000000001 to CH-000000000014, etc. The counter value is the same for a given Link, so CH/VAT/PAYE values match. New UBRNs were assigned to all Links on initial load via Spark, as there were no previous Links to compare them with.	Generated 14 Links, using same approach as for Month 1. But this time we add a suffix "X" to the field value where the counter is even. So CH-000000000001 is unchanged in the new list of Links. But CH-000000000002 is replaced with CH-000000000002X. This means the Month 2 set contains 7 matching Links, and 7 new Links, compared to Month 1. The matching Links should get the **same UBRN**. The non-matching Links (with "X") should get a **new UBRN**. Also, 7 of the previous Links no longer occur in the new Links.
